Estimated Release June 10, 2019		Anticipated Award Quarter Q4 2024	
POC Name Jared Krieger	POC Phone 9402937492	POC Email jared.krieger@fema.dhs.gov	
Description FEMA is seeking a transactional solution for address correction and other address related services including geocoding, flood mapping and parcel data. The service acquired will integrate with FEMA's Java Address Correction Service (JACS). FEMA has a requirement for four (4) services: • Address correction to the parcel level including geocoding; • Flood mapping determinations based on corrected addresses; • Parcel attribute data based on corrected address parcel numbers and; • "Reverse lookup" of addresses based on geospatial information. Quality of data is of high importance to FEMA, as is the frequency with which it is updated. FEMA seeks information that: • Discusses data sources and how data is maintained; • Provides a data sampling in the format and test interface; • Identifies the sourcing of the seeded database by providing the states, county and zip codes completing their repository (library) of data available to FEMA. Data from CONUS and OCONUS (includes: American Samoa, Guam, Marianas, Puerto Rico, U.S. Virgin Islands) areas of the United States is required. In addition to the production service, FEMA requires access to a testing service during implementation and for continued testing through updates to FEMA's systems.			

APFS Number F2019047725	NAICS Code 541690	Component FEMA	Sub-component None

POC Name David Orris	POC Phone 301-447-1830	POC Email David.Orris@fema.dhs.gov	
Description The Federal Emergency Management Agency (FEMA), part of the Department of Homeland Security, is divided into ten Regional Offices. The Regional Offices are responsible for the delivery of the Hazard Mitigation Assistance (HMA) Programs to the States, Tribes, U.S. Territories and Local Governments within their respective Regions. A major component of the HMA programs is that the programs/projects be cost-effective. Applicants and Sub-applicants to the HMA programs use the FEMA Benefit-Cost Analysis (BCA) Tool to demonstrate the cost-effectiveness of the mitigation projects that they are submitting for federal funding. The purpose of this task order is to provide assistance to FEMA to operate and maintain the benefit cost helpline during the period of performance.

Description

The Federal Emergency Management Agency (FEMA) requires a Budgeting system that supports the Planning, Programming, Budgeting, and Execution (PPBE) framework. FEMA seeks Software as a Service (SaaS) which has the capability to import financial execution data to modernize our existing manual processes. The high-level goals of this system are intended to improve the speed and accuracy of producing multi-year funding plans, planning and fiscal guidance, required documents, tracking progress, measuring results, and comprehensive reporting to ensure overall accountability throughout the PPBE process. FEMA FSM anticipates issuing a single-award BPA under GSA Schedule 70.

Description

The contractor shall provide ISSO support services that is provided to the agency's system owners and key stakeholders for security authorization support throughout the system's lifecycle to include classified and unclassified systems. The contractor shall provide staff appropriately experienced personnel in support of additional systems and applications through BPA call orders as the Government's requirements evolve. FEMA has approximately 110 IT systems of various sizes and complexity to include various system designations such as high value assets, financial, privacy, mission essential and mission support. There are an additional 350 applications that are supporting the 110 systems that require security authorization support. All systems and applications are in various stages of the system lifecycle ranging from conception and design to decommissioning. Out of the 110 systems, 27 are enterprise systems; the remaining 60 are program management office (PMO) area specific systems. There are 9 systems that have been identified as classified. This PWS shall also support the numerous modernization efforts across the agency to transition systems off legacy technology, provide sound cybersecurity Enterprise solutions and migrate to a cloud environment.

Description

To provide transportation support for the Federal Emergency Management Agency (FEMA) Region X in support for the State of Alaska with Disaster Response and Recovery efforts. Alaska is isolated from the mainland of the United States and lacks the necessary resources in Alaska to provide support following the impact of the disaster. The impact of the disaster will bring unprecedented damages, that will amplify the response and recovery efforts with challenges to meet survivor requirements located throughout Alaska, specifically to those secluded areas like the mountain and inland regions. Accessibility issues due to damaged transportation infrastructure will have survivors waiting longer periods of time to receive life sustaining supplies.

Description

As national emergency situations occur, the need for transportation and providing logistics services to the "affected areas" is critical. An efficient, reliable and highly flexible operation is needed to provide FEMA, and regional, state, local, tribal and territorial governments, the life sustaining supplies and assets to individuals and first responders in the affected areas. Therefore, the contractor(s) shall possess an adequately controlled infrastructure, including transportation resource fleet, personnel, material handling equipment (MHE), as well as information technology capability to efficiently transload, transport, manage, track, communicate, and process various levels of supplies into the impacted area. Previously, FEMA had a single award IDIQ for the cross docking support. The ceiling was exceeded in just over two (2) years of the five (5) year period of performance (POP). During the FY19 Disaster Season, FEMA utilized a Justification and Approval (J&A) as a basis to provide these services via a contract. A long term solution with a higher ceiling and expanded capabilities is needed to meet this future need. With ISB support being a new support function needed, and considering it requires similar expertise and management, the new IDIQ will include cross docking and ISB support. FEMA intends to award up to three (3) Indefinite Quantity Indefinite Delivery (IDIQ) contracts, to support CONUS disaster response locations. FEMA will issue competitive task orders to fulfill requirements that have been requested by the regions and/or FEMA HQ. FEMA will consider activating cross dock and/or empty trailer yard functions after FEMA's Initial Response Resources (IRR) packages have been deployed. FEMA may only consider activating contractor run ISBs when the federal bandwidth has reached capacity. Supplement services for FEMA FSA/ISBs could be activated at any time during the emergency response. The contractor(s) shall provide all personnel, training, equipment, tools, materials, supervision and all other items, unless specified as government furnished, to manage and perform key logistical aspects and support for either a cross dock site (CDS), drop/retrograde lot, and/or an (ISB), or both CDS and ISB at the same location, as set forth in task orders. The contractor shall also be able to provide these same support services on a supplemental basis at a FEMA managed ISB.

Description

The AIMS contract will support all programs and initiatives within three branches of THD (Radiological Emergency Preparedness Program (REPP), Business Operations (BizOps), and Policy & Doctrine (P&D). The intent of this contract is to ensure that any program-related communication received and/or shared by our partners is consistent with regard to content, as well as format and that all appropriate methods of communication are leveraged as appropriate (web, fact sheets, conferences, social media, etc.) to effectively communicate information on our programs, activities and events. To that end, the Contractor shall serve as the THD Communications & Outreach Section's liaison with the three Branches; i.e., arrange meetings with Program Office personnel and customers to clarify requirements, establish schedules, develop and review documents, and provide feedback. The contractor will leverage other cross- functional areas to include doctrine, finance, administration and logistics, design and control, evaluation, etc. Contractor must have experience in usage of SharePoint-based systems and utilizes SharePoint as a highly visible method for assigning, tracking, and collecting comments and approvals for Action Items.

Description

OneResponder will continue to consist of three technical components: browser-based software interfaces used by both FEMA and SLTT organizations, private sector entities, non- governmental organizations, and other non-FEMA Federal agency participants; FedRAMP approved cloud hosting; and a system integration layer providing interoperability with other FEMA and SLTT organizations, private sector entities, non-governmental organizations, and other non-FEMA Federal agencies systems A. Development Methodology Requirements OneResponder operation and maintenance will continue to use an agile/SCRUM methodology supporting DevOps and Continuous-Integration/Continuous-Delivery consistent with the strategic goals of FEMA and FEMA IT. All software will be compliant with FEMA IT cybersecurity policies and procedures and all user interfaces must be Section 508 compliant. All software must be compatible for hosting in a FedRAMP approved cloud environment. B. Functional Requirements Contractor will operate and maintain OneResponder consisting of a centralized database and three browser-based user applications. One user application will continue to be targeted at FEMA and one application for SLTT organizations, private sector entities, non-governmental organizations, and other non- FEMA Federal agencies administrative staff who will use the application to manage resource catalogs and qualifications. The last application will be targeted at emergency responders who will use the application to manage their own qualifications and PTBs. All software interfaces must be 508 compliant, must adhere to FEMA standards with respect to PII and cybersecurity, and must be accessible on any standard, modern internet browser supporting HTML 5.0. C. NQS Centralized Database The OneResponder centralized database will store all data used for the OneResponder user applications and the NQS Application Programming Interface (NQS-API). The database will be a fully self-documenting database implementing Boyce-Codd 3rd Normal Form and will adhere to all FEMA IT standards regarding PII and Cybersecurity.

Description

Two projects for City of Tucson, AZ require analysis to determine if conceived flood risk reduction projects are feasible given the local hydrology and physical constraints imposed on the projects given the current built out conditions. The Honolulu project requires greater understanding of flooding flow paths and choke points in highly urbanized neighborhoods of Honolulu, Hawaii. Identification of flood hazard choke points will inform mitigation projects intended to reduce flooding hazard and reduce risk.

Description The Department of Homeland Security (DHS) Federal Emergency Management Agency (FEMA), National Preparedness Directorate (NPD), National Training and Education Division (NTED) requires ongoing development support of FRTS and RES and integration of various systems within NTED, as appropriate. This will enable NTED external stakeholders' access to consistent and unified preparedness information, enhance user experience, and allow NTED to better leverage data within its various systems as to support mission requirements and reporting. To support this consolidation effort, NTED has initiated a System Integration Project, which also addresses FEMA infrastructure and management efforts (e.g., enterprise architecture, hosting migration, financial controls, contract vehicles) to achieve streamlined access to NTED information.

--	--------------------------------	--

Description

SCOPE The contractor shall provide digital communication and content support services to accomplish the following objectives: 1. Websites New Development, Updates, and Maintenance 2. Mobile App New Development, Updates, and Maintenance 3. Digital Asset Management System Development, Updates, and Maintenance 4. Graphic and User Experience Design 5. Text Messaging Platform and Service Support 6. Disaster Related Clins OBJECTIVES The OEA is looking to leverage existing websites and mobile application to provide the best possible resources for survivors. We shall be proactive in staying up to date with existing technology and design standards. SPECIFIC REQUIREMENTS/TASKS Websites New Development, Updates and Maintenance Perform routine maintenance of the FEMA websites (Drupal) including: ensuring security and functional patches are kept up-to-date IAW DHS policy; and module updates will be identified, tested, and implemented in conjunction with DHS mandated deployment practices. Design, implement and maintain web functionality & technologies including, but not limited to: Drupal, PHP, HTML, JavaScript, JQuery, CSS, RSS feeds, widgets, forms, email updates, and other DHTML and "new media" elements. Provide system administration for the enterprise content management system (Drupal), asset management system (Diamond), Google Analytics, and other related systems. Manage workflows, content types, user interfaces, and other administrative tasks that do not require knowledge of the system's underlying code but are critical to the success of the product. Provide technical expertise to design, develop, test and deploy new websites. Provide technical expertise with transferring content from old websites to new websites (managed directly or indirectly by OEA). Provide technical expertise to include, but not limited to: Drupal, Ruby-on-Rails, PHP, Objective C, Java, Linux, MySQL, Amazon Web Services, and related development technologies. Build out web analytics program, including collection, reporting, and analysis. Analyze website analytics in order to make recommendations to improve overall website performance with the goal of increasing online search visibility. Monitor and understand on-site visitor behavior and stays connected with new trends and strategies for optimization. Provide insights on data related to website traffic, bounce rates, funnel performance, conversion rates, and any other website related activity. Use and maintain common analytics software. Verify and validate that all Graphic and UX design artifacts are in compliance with regulations, guidelines, and best practices, including those issued by the W3C and Federal Access Board (Section 508). Perform content analysis and validation services including checking for errors, utilizing Drupal based tools as well as other 3rd party tools provided. Assist with testing all websites, owned utilized by OEA. Create, maintain, and use a comprehensive Test Plan for use before and during code deployments. The Test Plan must include 508 testing, regression testing, and processes to identify content related issues. Verify and validate the integrity of any content (English and non-English) moved during project, to include checking that the content has not changed, is 508 accessible, W3C compliant, and does not contain broken links. Test and correct website coding, layout, and design, to ensure compliance with applicable federal, department and agency regulations, standards and policies, including Section 508. Provide DHS certified 508 Trusted Testers, developers and Graphics support. Work with OEA and DHS to coordinate, schedule, and submit code, paperwork, and other items necessary for code releases and hosting requirements. Work with OEA to conduct after hours code releases. Utilize customer-ticketing system(s) to manage developmental tasks. Provide a weekly report of tasks completed and status of items yet to be finished. Maintain and work with the OEA staff to update tools, files, guides, and policies used by CMS users. Develop and document standard operating procedures for the technical management of content on OEA external websites. Utilize commercial standards and procedures to maximum extent in achievement of this objective. Provide thorough, detailed, and comprehensive documentation of development on FEMA.gov, Ready.gov, Careers.fema.gov, Recovery.fema.gov. Provide subject matter expertise on the functionality of all content (and asset) management system and existing applications. Proactively initiate corrections and/or provide feedback to content editors based on feedback from the public and other FEMA program offices received via the FEMA web team mailbox. Provide FEMA, DHS, and industry standards Subject Matter Expertise to assist OEA with compliance to W3C standards, federal laws, regulations, and website policies. Work closely with Information Systems Security Officer (ISSO), DHS IS2O, and FEMA Cyber Security Division (CSD) Office. Mobile App New Development, updates, and Maintenance Perform routine maintenance of the FEMA App, built using Cordova and Ruby-on-Rails. Ensure all security and software updates are kept current. Implement and maintain App functionality including but not limited to HTML: JavaScript, JQuery, CSS, Ruby on Rails, Objective C, Java, widgets, forms, email updates, Cordova, PhoneGap, Google Analytics and other mobile focused items. Manage the deployment process for the FEMA app through the Apple App Store and Google Play Store. Provide technical expertise to design, develop, test and deploy application features for all products. Provide technical expertise to include, but not limited to: Drupal, Ruby-on-Rails, PHP, Objective C, Java, Linux, MySQL, Amazon Web Services, and related development technologies. Build out web analytics program, including collection, reporting, and analysis. Analyze website analytics in order to make recommendations to improve overall website performance with the goal of increasing online search visibility. Monitor and understand on-site visitor behavior and stays connected with new trends and strategies for optimization. Provide insights on data related to website traffic, bounce rates, funnel performance, conversion rates, and any other website related activity. Use and maintain common analytics software. Verify and validate that all Graphic and UX design artifacts are in compliance with regulations, guidelines, and best practices, including those issued by the W3C and Federal Access Board (Section 508). Perform content analysis and validation services including checking for errors, utilizing Drupal based tools as well as other 3rd party tools provided. Assist with testing the FEMA Mobile App utilized by OEA. Create, maintain, and use a comprehensive Test Plan for use before and during code deployments. The Test Plan must include 508 testing, regression testing, and processes to identify content related issues. Verify and validate the integrity of any content (English and non-English) moved during project, to include checking that the content has not changed, is 508 accessible, W3C compliant, and does not contain broken links. Test and correct website coding, layout, and design, to ensure compliance with applicable federal, department and agency regulations, standards and policies, including Section 508. Provide DHS certified 508 Trusted Testers, developers and Graphics support. Provide thorough, detailed, and comprehensive documentation of development on the FEMA App. Digital Asset Management System Development, Updates, and Maintenance Post files and content to various FEMA websites, applications, and 3rd party sites including the FEMA Document Library, Photo Library, and Multimedia Library in both current and future iterations at the discretion of OEA. Perform routine maintenance of the FEMA Digital Asset system by ensuring security, and software updates are current. Maintain functionality of the system through Ruby on Rails development. Verify and validate that all Graphic and UX design artifacts are in compliance with regulations, guidelines, and best practices, including those issued by the W3C and Federal Access Board (Section 508). Perform content analysis and validation services including checking for errors, utilizing Drupal based tools as well as other 3rd party tools provided. Create, maintain, and use a comprehensive Test Plan for use before and during code deployments. The Test Plan must include 508 testing, regression testing, and processes to identify content related issues. Verify and validate the integrity of any content (English and non-English) moved during project, to include checking that the content has not changed, is 508 accessible, W3C compliant, and does not contain broken links. Test and correct website coding, layout, and design, to ensure compliance with applicable federal, department and agency regulations, standards and policies, including Section 508. Provide DHS certified 508 Trusted Testers, developers and Graphics support. Provide technical support for the administration of an Amazon Web Services environment to include management of load balancing, app servers, data storage, databases, users, monitoring and security. Provide thorough, detailed, and comprehensive documentation of development on the FEMA Digital Asset Management System Development. Graphic and User Experience Design Create User Experience and Graphic design mockups of website and application features using technologies such as Adobe Photoshop/Illustrator, Wireframing Tools, and Prototyping Tools. Create and/or digitally manipulate web and social media graphics, print/hardcopy materials, infographics, imagery, and multimedia, including captioning and posting of video for inclusion on OEA websites, applications, stores, and social sites. Create presentation material and maintain training materials, quick reference guides, and other materials including, but not limited to, page presentation, search engine optimization, writing for the web, and web usability. Make recommendations on information architecture, site functionality, and navigation to promote accessibility, usability, usefulness, and consistency throughout the site. Advise users on how to make changes to documents complying with Section 508 and at the direction of OEA, implementing the fixes required for compliance. Assist OEA with managing email mailboxes and requests from stakeholders based on approved guidelines and training. Provide expertise with writing and organizing content incorporating best practices like plain language, descriptive headings, visuals (graphics, photos, videos). As required, provide weekly numbers on number of internal customers helped, number of pages fixed/published, and other additional reporting. Assist OEA with reviewing, rejecting, editing, and publishing documents and web pages submitted by users. Assist OEA with uploading non-english content to the websites, mobile application and to the digital asset management system. Obtain a Text Messaging platform, and to provide development support, support services, and a SMS short code. Procure and manage the leasing and transfer of the FEMA shortcode. Procure an open source platform to enable customization and integration with data from third-party systems and application programming interfaces (APIs). Procure a platform that provides a subscriber-based messaging service with the ability for 1-to-many or 1-to-1 2-way text messaging, and the ability to collect, organize, and respond to inbound messages from individual subscribers. Procure a platform that allows agency to send customized and/or automated messages to subscribers based on metadata collected via interactions with the subscribers, including but not limited to keywords, area code, zip code, and other geographic data, responses to prompts, and more that do not violate privacy requirements. Procure a platform with the ability to store and automate customizable responses or a series of responses based on keywords, metadata and user interactions, such as the ability to create and implement on-boarding programs, time-limited messaging programs, look-ups, etc. Procure a system with the ability to segment subscribers into lists associated with keywords, metadata, or interactions and compile customizable reports in real-time that track a variety of data including growth of lists, message details, deliveries, full conversations with individual subscribers, metadata and others. Provide development support as needed for customizable code or data integration to enable functions such as information lookup. The Vendor will proactively pursue new capabilities as mobile technologies evolve and make recommendations to the Agency based on industry trends and best practices. Verify and validate that all Graphic and UX design artifacts are in compliance with regulations, guidelines, and best practices, including those issued by the W3C and Federal Access Board (Section 508). Perform content analysis and validation services including checking for errors, utilizing Drupal based tools as well as other 3rd party tools provided. Assist with testing all online platforms utilized by OEA. Create, maintain, and use a comprehensive Test Plan for use before and during code deployments. The Test Plan must include 508 testing, regression testing, and processes to identify content related issues. Verify and validate the integrity of any content (English and non-English) moved during project, to include checking that the content has not changed, is 508 accessible, W3C compliant, and does not contain broken links. Test and correct website coding, layout, and design, to ensure compliance with applicable federal, department and agency regulations, standards and policies, including Section 508. Provide DHS certified 508 Trusted Testers, developers and Graphics support. Disaster Related Clins The type of work that may be performed in this Task is similar in scope to that described in throughout this SOW, but would be for efforts above and beyond the work already described therein and from result of disaster needs. The type of work described in this optional task may entail other web application development, update efforts, or support of cross platform mobile apps, graphics support, and/or web maintenance efforts. With the prospect of disasters we can't anticipate the number of optional tasks per year. This surge of existing tasking entails requirements gathering, project planning, Agile development, user testing, and deployment. The Contractor shall follow all Software Development Lifecycle (SDLC) practices specified by the Government to develop and enhance content for FEMA's mobile app and websites. The Contractor shall use existing content provided by the Government for all efforts in this task, unless otherwise directed by the Government to create new ways of graphically representing the content in interfaces and as activities as described below. The Contractor shall plan and develop or enhance delivery mechanisms and content representation accessible to a range various devices (e.g., smartphones, tablets, laptops, wearable technologies) include but are not limited to: Websites, Responsive web design, Mobile apps (for Android, iOS, Unity, or HTML5), Mobile application interfaces, HTML email designs, Interactive interfaces, Graphic design, Animation, Game and 3D design, Design documents, Wire frames, Activity descriptions, Storyboards.

Description In the FY20 OMB briefing, the CDP was provided a nominal amount to support the operations and maintenance of CDPs LAN. This action was more clearly defined in FEMA-CDP-Action-Office for FY21 Budget Congressional Briefing Prep Materials ACT:0900813, where the CDP was tasked to provided talking points for Mr. Gorman's FY21 Budget Congressional Briefings; specifically on page 2 of document 'NPD FY2021 Budget Briefing to Congress', talking points were provided to the question posed about the impact of concerning FA cost reduction for CDP equipment. The NPD inserted response stated the FY2020 enactment provided one-time increases within the CDP which was applied to cover the purchase replacement of equipment and the upgrade of CDP servers. This eCAPS TaskID is to execute the server upgrade.
